Experience - (4.5+) Yrs

Medibuddy

SDE-2

Apr 25 - Curr

- **Corporate-Reporting-Pipeline**
 - Implemented an idempotent **SQS consumer** scaling to ~**10K events/min**, This service orchestrates the core data transformation logic, reducing data-fetch **latency** and preventing event loss for key dashboards, health trends across platforms
 - Engineered a resilient **data ingestion pipeline** from *scratch* integrating multiple sources into a centralized data lake, optimized processing logic to handle **millions** of records per batch leveraging NumPy **vectorization** to replace slow, iterative operations, slashing report generation time from 15 days to under 4 hours
 - As an Owner of this system, developed **CI/CD pipeline**, improved logging, integrated new-relic monitoring, spearheaded multiple features
- **LLM-engine**: Implemented and integrated a **unified interface** for interacting with LLMs. Integrated LLM apis and prompt preprocessing by providing templates, which is used by doctors and employees
- **Digitisation-System**
 - Architected a **AWS IDP pipeline** using OCR, ML anomaly detection for processing insurance claims by reducing manual effort and speeding up claims processing for insurance companies in ~**30 seconds**
 - **Led** the lab reports digitisation team and solved **critical** production issues, fixed services downtime issue caused by database connection timeouts due to data migrations, improving **tat by 83%**
 - Implemented centralized logging across services to **improve monitoring, visibility and quick recovery** in case of errors, created monitoring dashboard and alarms for SQS queues to detect spikes & throughput

Simplr

Software Engineer

July 23 - Dec 24

- **Integrations** - Implemented and designed Google calendar **2 way event sync** service using CDC, kafka achieving scalability of **3k rpm** which helped onboarding **20+ merchants**
- Created **gRPC** connectors for microservices, reducing network latency and improving user-facing response times across the e-commerce platform.
- Integrated various 3rd party integrations seamlessly for supporting file storages (**google drive, onedrive**), calendars (**outlook, google-cal**) by leveraging identity management standards like **OAuth2**, OpenId to implement secure and scalable authentication and provisioning solutions

Licious SDE-1

June 21 - June 23

- Contributed in improving **shopping experience** by reducing **latency** of products discovery, reducing extra network calls by implementing **BFF** layer and improving visibility of core products which helped in increasing revenue by 5% across different platforms
- Implemented **Order management system** endpoints using Domain -Driven-Design architecture
- Optimized events persistence using database storage and **Outbox pattern** for kafka publisher downtimes
- Developed **shop by category** module from **0 to 1** owning all the stages, backend , UI, and deployment

Skills

Programming languages: Java(Proficient), ReactJS, Typescript, Python, Golang (Familiar)

Cloud: AWS Cloud (SQS, Cloudwatch, ECS, EKS), Docker, Kubernetes

Databases: PostgreSQL, MySQL, MongoDB, Elasticsearch, Redis

Frameworks/Orms : Gin, Go-chi, Gorm, Springboot, Hibernate, NodeJs, gRPC

Infra/Monitoring : Terraform, Liquibase, Datadog, New Relic, Grafana

Soft Skills: Leadership, Public Speaking, Team Management

Education

Birla Institute of Technology & Science Pilani, Hyderabad, India

2016 - 2021

Bachelors of Engineering in Mechanical Engineering + MSc in Economics
